Traffic Impacts on Highway 94 East of Marksheffel Begin June 25

On Wednesday, June 25, crews will begin construction for the installation of a new water pipeline along State Highway 94 east of Marksheffel Road. The speed limit in the area will be reduced and the shoulders of the road will be restricted in the construction zones.

Motorists are asked to use caution and watch for:

- Semi-trucks and other construction vehicles merging with traffic;
- Changes in speed limits near construction activities; and
- Warning signs and barricades on the shoulders alerting travelers about construction hazards.

While pipeline installation in this area will continue over the next several months, the shoulder work along Highway 94 should be complete in July.

Note: *If weather causes schedule delays, dates above may shift slightly.*

This construction project is part of the Southern Delivery System (SDS). Colorado Springs Utilities will provide ongoing traffic updates using news advisories and social media, as well as online at www.SDSwater.org. Members of the public can call the **SDS Construction Hotline at 855-SDS-4YOU (737-4968)** for more information.
